

INDEX TO VOLUME 67 OF THE *JOURNAL OF CAVE AND KARST STUDIES*

IRA D. SASOWSKY & ELAINE SINKOVICH

Department of Geology, University of Akron, Akron, OH 44325-4101, USA

This index covers all articles and abstracts published in volume 67 parts 1, 2, and 3. Selected abstracts from the 2005 Society convention in Huntsville, Alabama are included.

The index has three sections. The first is a Keyword index, containing general and specific terms from the title and body of an article. This includes cave names, geographic names, etc. Numerical keywords (such as 1814) are indexed according to alphabetic spelling (Eighteen fourteen). The second section is a Biologic names index. These terms are Latin names of organisms discussed in articles. For articles containing extensive lists of organisms indexing was conducted at least to the level of Order. The third section is an alphabetical Author index. Articles with multiple authors are indexed for each author, and each author's name was cited as given.

Citations include only the name of the author, followed by the page numbers. Within an index listing, such as "Bats", the earliest article is cited first.
